Glossary

Term	Definition
SAE	Sparse autoencoder.
Latent / feature	A learned internal SAE component used to represent model activations.
Residual stream	The shared activation pathway updated by transformer layers.
Ablation	An intervention that removes or suppresses a model component or signal.
Steering	An intervention that modifies model activations to test or influence behavior.
Flip rate	The proportion of evaluated episodes whose outcome changes under an intervention.
Adoption	Feedback-uptake outcome in which the Solver changes to the Critic-supported answer.
Retention	Feedback-uptake outcome in which the Solver retains its original answer.

Abstract

To be written after the results and discussion are finalized.

Chapter 1

Introduction

1.1 Motivation

1.2 Research Question and Objectives

1.3 Contributions

1.4 Report Roadmap

Chapter 2

Background

2.1 Transformers and the Residual Stream

2.2 Mechanistic Interpretability

2.2.1 Superposition and Polysemanticity

2.2.2 Probing and Its Limits

2.2.3 Causal Methods

2.3 Sparse Autoencoders

2.4 LLM Feedback and Critique

Chapter 3

Related Work

3.1 SAE Feature Discovery and Evaluation

3.2 Activation Steering and Representation Engineering

3.3 Mechanistic Studies of Sycophancy and Feedback Behavior

3.4 Multi-Hop Question Answering as a Testbed

3.5 Gap Addressed by This Work

Chapter 4

The Models

4.1 Solver and Critic

4.2 Rationale for Using Different Models

4.3 Sparse Autoencoder Sources

4.4 Model Limitations

Chapter 5

Data and Exploratory Data Analysis

5.1 MuSiQue

5.2 Exploratory Data Analysis

5.3 Problems Identified

5.4 Synthetic Data

5.5 Final Dataset

Chapter 6

Methodology

6.1 Problem Definition and Label Taxonomy

6.2 Pipeline Overview

6.3 Synthetic Data Generation

6.4 Solver–Critic Forward Pass

6.5 Interaction Labeling

6.6 Activation Caching

6.7 Layer Selection Probe

6.8 SAE Training

6.9 Feature Selection Probe

6.10 Causality Experiments

6.11 Metrics and Statistical Analysis

6.12 Experimental Setup and Reproducibility

Chapter 7

Results

7.1 Label Distribution and Agreement

7.2 Objective 1: Pipeline and Activation Dataset

7.3 Objective 2: SAE Representation

7.4 Objective 3: Predictive Features

7.5 Objective 4: Causal Tests

7.6 Earlier Exploratory Runs

7.7 Overall Answer to the Research Question

Chapter 8

Discussion

8.1 Interpretation of Findings

8.2 Comparison with Prior Work

8.3 Threats to Validity

8.4 Limitations

8.5 Implications for Other Researchers

8.6 Next Steps

Chapter 9

Conclusion

Author Contributions
